

Nancy Langston is a professor at the University of Wisconsin-Madison in the Department of Forest and Wildlife Ecology and the Nelson Institute for Environmental Studies. Past-president of the American Society for Environmental History, she is currently editor of the flagship journal in the field, *Environmental History*. Her most recent book, *Toxic Bodies: Hormone Disruptors and the Legacy of DES* (Yale, 2010), asks how and why endocrine disrupting chemicals have saturated bodies and environments. Her first book, *Forest Dreams, Forest Nightmares* (University of Washington Press, 1995) examined the cause of the forest health crisis in the Inland West. Her second book, *Where Land and Water Meet*, (University of Washington Press, 2003) explored watershed change in the arid west. Her current book project, *Sustaining Lake Superior*, focuses on the interconnected histories of mining, paper, and forestry in the Lake Superior watershed. Langston has been the recipient of fellowships from the Marshall Foundation, the National Science Foundation, the National Humanities Center, the American Philosophical Society, and the American Council of Learned Societies. Her first book won the 1997 Forest History Society Prize for best book in forest and conservation history, and a recent article won the 2009 Leopold-Hidy Prize for best article in *Environmental History*. She has been appointed by the King of Sweden as the King Carl Gustaf XVI Professor of Environmental Sciences for 2012-2013.
